Neo4j Database

Development Environment

Tests

General Overview

What is it?

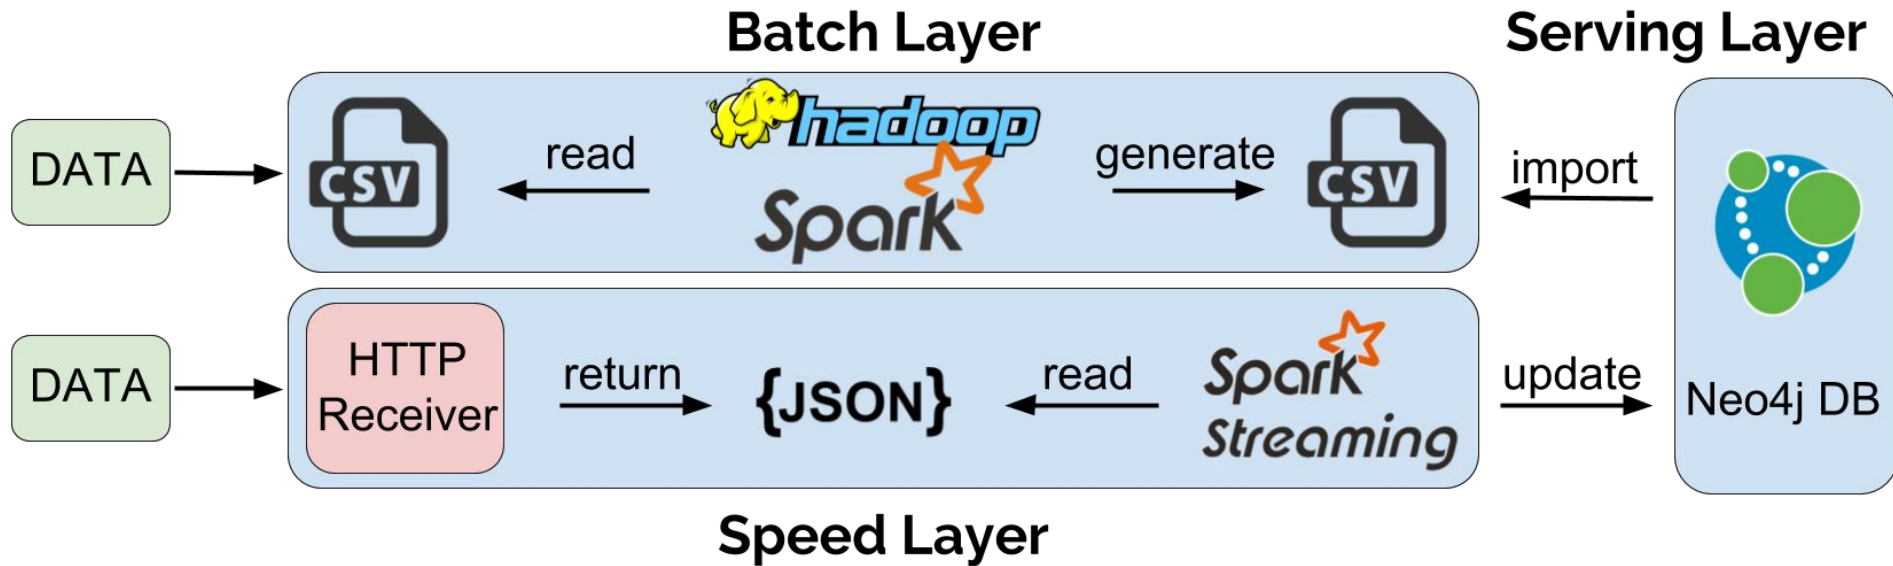

San Francisco --> Caracas

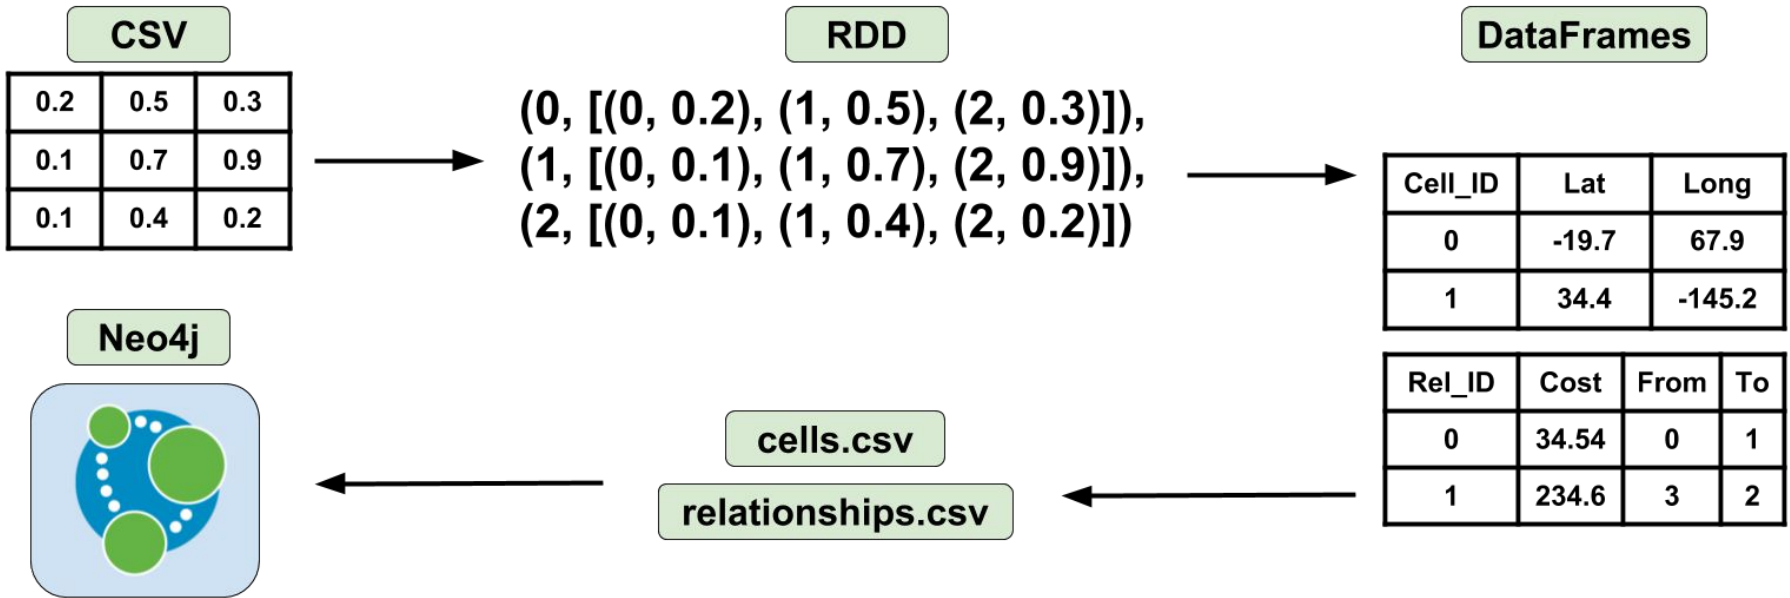

Technical Overview

Big Data Environment

Batch Processing

Streaming Processing

JSON

```
{“lat”:19.7,“long”:36.4,“cell”:0.7}  
...  
{“lat”:56.2,“long”:134.9,“cell”:0.2}
```

RDD

```
(19.7, 36.4, 0.7),  
...  
(56.2, 134.9, 0.2)
```

Neo4j

Cypher

```
MATCH (c:Cell{lat:19.7,long:36.4})<-[r]-()  
SET r.cost = 1.43
```

Neo4j Database

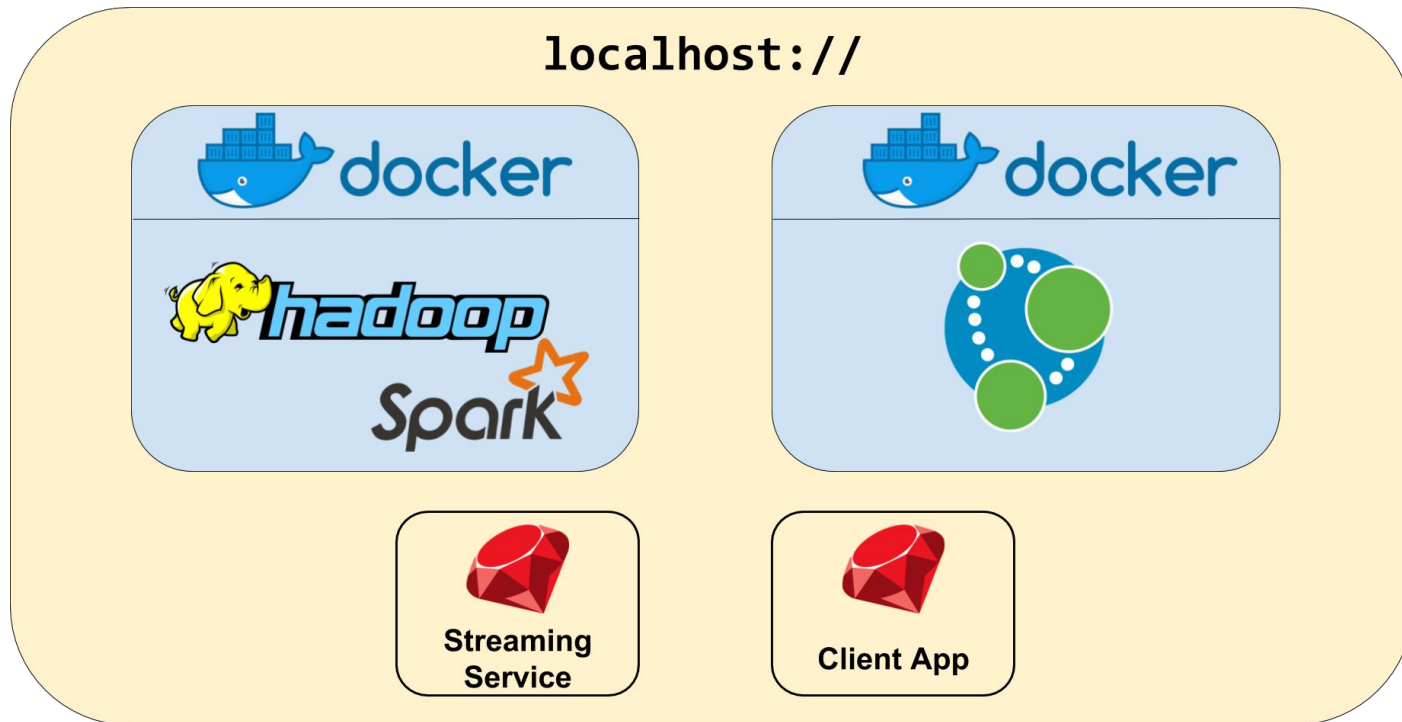

32 868 925 nodes

225 213 632 relationships

A* to find the “best” path

Development Environment

CLI Tool

```
$ ./marinewatch-cli -h
```

```
Usage: marinewatch-cli [-h] [-b <int>] [-c <string>] [-u <string>] [-d <string>] [-s] [-t]
```

- h Help. Display this message and quit.
- b <int> Run batch process with specified accuracy.
- c <string> Run streaming process listening on specified address.
- u <string> Create new database with name.
- d <string> Start database with name.
- s Start web server.
- t Start streaming server.

Test #1

San Francisco --> Caracas computed in 200ms

Using the Panama Canal

Test #2

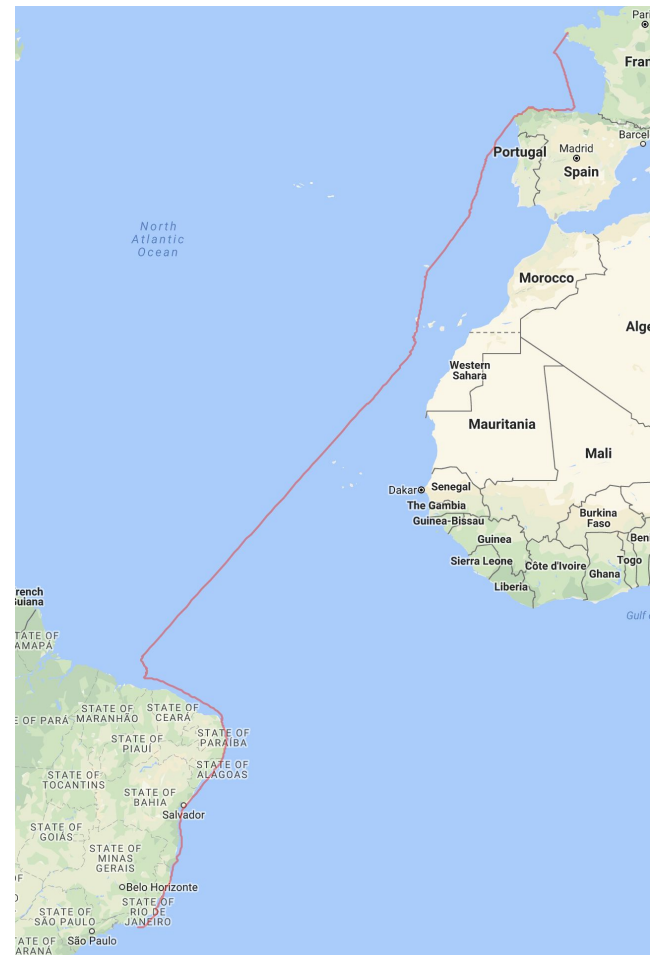

Rotterdam --> Kuala Lumpur computed in 2s

Using the Main, the Danube and the Suez Canal

Test #3

Brest --> Rio de Janeiro

computed in 250ms
